MaxiCut®

MaxiCut[®] Ultra[™] is our latest cut offering for <u>dry environments</u> that integrates the core values of MaxiCut[®] into a thinner, more comfortable and durable package.

TECHNOLOGIES INSIDE

Comfortable cut protection

Cut protection is the most challenging aspect of glove technology. However, theoretical protection does not necessarily translate into practical benefits if wearer comfort is compromised.

Our CUTtech® technology is used to create carrier materials that provide the desired cut protection while remaining stretchable and flexible without breaking, enhancing the wearer experience. We meticulously build the fiber bundles ourselves, this way we can perfectly match them to our coating. For maximum cut protection, we use UHMWPE, glass, Kevlar® and metal fibers which we combine flexible nylon, elastane and polyester yarns to create a high-performance material.

Additionally, we reinforce the area between thumb and forefinger with a special nitrile patch to enhance the gloves' durability.

CUTtech® – optimum cut resistance through to innovative fiber construction.

360° Breathable

360° breathability - Our patented micro-foam coating channels moisture and heat away from your skin to maintain an optimal hand temperature so you can work productively.

For a greater cooling effect look to use our AD-APT® Technology which works in conjunction with AIRtech®.

Longer use saves you money and protects the environment Gloves equipped with DURAtech® are designed for durability. Our patented DURAtech® technology ensures superior abrasion resistance. But that's not all—when paired with preconditioned liners, the coating can be washed multiple times without any loss of quality. This extends the glove's service life significantly, helping you save money and conserve resources.

Reduces hand fatigue

No two hands are the same—they're as unique as we are. That's why our gloves are designed to adapt to every hand.

CLEANLINESS GUARANTEED

We use our HandCare® Program for every single ATG® product. Not only do we make certain that all the elements used in our manufacturing process are safe for our employees, we also wash all the gloves after the production process as a further step in ensuring cleanliness. During this laundering process, we prefer the use of water that is rain-harvested, treated and continually recycled from our own water treatment facilities.

This enables us to guarantee our gloves to be "Fresh out of the pack" which is certified by Oeko-Tex® according to Standard 100. We do not use any SVHC during our manufacturing process.

And if that wasn't enough our gloves are also dermatologically accredited by the Skin Health Alliance. The Skin Health Alliance seal gives, for the first time in the safety industry, professional glove users the confidence that ATG®,s full range of gloves are "dermatologically safe" and the science and research behind them is robust.

More information about HandCare® by ATG® is available at www.atg-glovesolutions.com.
